

B2 Systems

Information Pack

Introduction

We appreciate that for School Business Leaders, time is the most valuable commodity and that time wasted manually collating and updating asset registers, is time that you will never get back. Investing in an inventory management framework can result in huge savings in both time and money for your school or trust.

B2 systems ensures manual management of assets is a thing of the past. We have developed an ecosystem that is designed from the ground up to save you time and increase operational efficiency. Our product is at the leading edge of technology and delivers results for your SLT, finance staff, ICT staff, site staff, governors & auditors.

B2 Freedom, our Asset Discovery Tool, ensures your IT equipment is seamlessly synced automatically with your cloud-based inventory register.

Our innovative, low cost barcoded security labels ensure that updating inventory location is fast and simple and can be done via our smartphone and tablet app.

Our products allow for so much more than keeping a register of inventory. Editing, updating, repair logging, writing off, producing reports and so much more are now at your fingertips.

Keeping our System Simple and Costs Low is our driving principle.

Pricing is dependent on the size of your School, College or MAT. For a free, transparent and no obligation quotation we need only the name of your School and number of pupils you have on roll.

“The definition of genius is taking the complex and making it simple.”

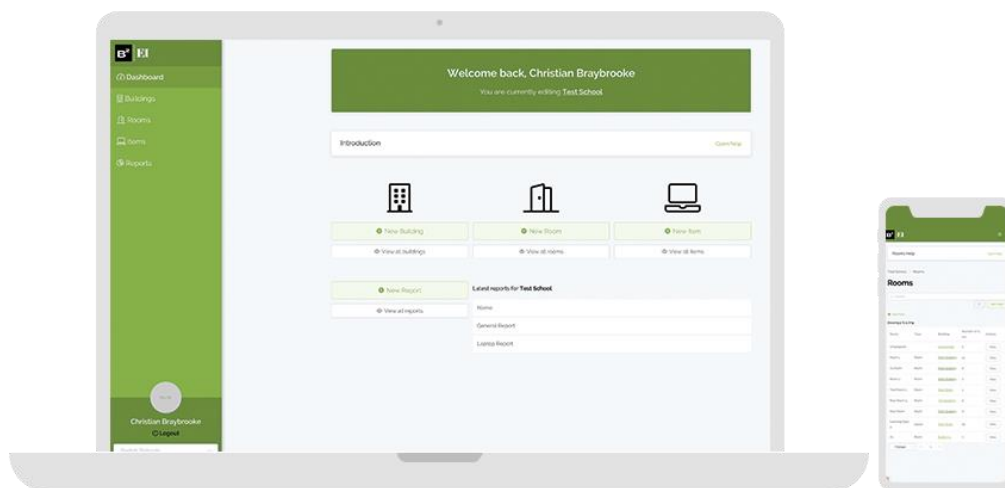

- Albert Einstein

Education Inventory Platform

The Education Inventory platform is at the heart of everything we do. It gives organisations access to their asset register from any internet enabled device, users can then generate in-depth reports at a click of a button.

From the Education Inventory dashboard, users can see a holistic view of their school with access to buildings, rooms, items and reports. Editing or transferring assets is a breeze with smart filters and bulk actions.

The bulk add tool is designed to save time, where users have the ability to add a whole collection of items using just 1 row of a table.

With the implementation of various roles, it is simple to setup multiple users for one particular school or the same user across multiple schools within a trust. Organisation admins can select roles for each user, with options to provide logins for teachers, auditors, students and governors.

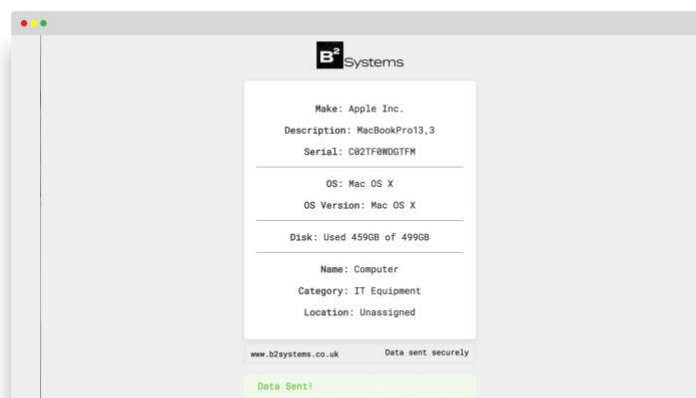

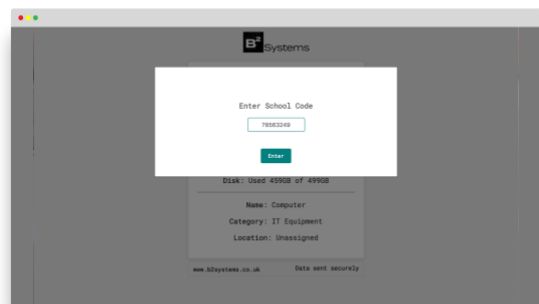

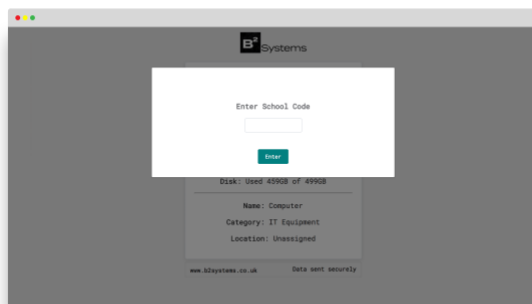

Every action that is taken with the Education Inventory system is logged on the server side, ensuring complete oversight into inventory or site modifications. Our enhanced logging system is a must have for audit and insurance purposes.

B2 Freedom IT Discovery Tool

Adding individual IT Equipment to an asset register, was once a long and time-consuming process with manual input of serial numbers, model information and even software usage. With our free discovery tool software for Windows, Mac, IOS and Android it is now completely automated.

B2 Freedom is a completely free piece of software which can be downloaded from the B2 Systems website or app store. Once downloaded, there is nothing to install – the software will automatically open and the user will be prompted to enter an 8 digit code. The software will then securely send the model, manufacturer, serial number and operating system data to the B2 servers.

Once device information has been sent to our servers, users will find information about the IT Equipment within their Education Inventory dashboard.

Barcoded Security Labels

Our barcoded security labels are not only a quick and easy way of updating inventory location within your school, they act as a form of protection against theft and item mistreatment. Accompanied with the B2 Scan app for IOS and Android, users can simply select a location and then scan the asset.

If the asset was not previously in this location the user will be asked if they wish to move the item to this location on the system. The asset label can also be scanned to find out more information about the particular item, including the location it is meant to be located.

Because the B2 labels are tamper resistant, they extremely difficult for students to remove and will break up upon tamper. It is however recommended to place the labels in a discreet position to prevent inevitable wear and tear.

Onsite Asset Discovery

The final part of the ecosystem is our onsite asset discovery service, carried out by one of our trained, DBS certified auditors. The exact nature and detail of the discovery service can be discussed and scaled to suit your specific requirements prior to the visit.

It will take one of our auditors approximately 1 day to carry out the discovery process, depending on the size of the site. All items over £50 in value will be recorded and where applicable serial numbers, manufacturer, model and description will also be provided.

Our auditors are also able to barcode label assets, using our own barcoded security labels or another supplier.

Once the audit has been completed the data will be loaded into the Education Inventory cloud platform where users are then able to view, filter and create in depth reports.

Our auditors are also able to provide onsite training for all of our various products and services as well as how to effectively keep your asset register up to date if required.
